Use the system of your choice for orbital speeds, etc. Solar Systems Without Sun An alternative to the solar system with sun, an astronomy picture describes your solar system without the sun. When you click on the planet, you'll get all the information about it. The details will include the number of moons, size, and orbital speed. Controls are simple and fun to use. And you can even save your current position, so you can come back and play through your position again, or use it as a checkpoint. In short, this is one of the best Unreal Tournament clones. And I still love the original Unreal Tournament too.
